

## **Third-Party Resources Used**

The following third-party resources were used in the development of the Intellihack 5.0 website project.

### Resources Used

1. PHP - PHP was used to create server-side functionality, including handling form submissions, user authentication, and content management.
2. Google Maps - Embedded Google Maps were added to the Contact Us page for location reference.
3. CSS - For layout, styling, and responsive design across different screen sizes.

### Assistance

I used ChatGPT a little bit to help generate some of the structure and style of this project.

Each of these resources contributed to making the website dynamic, functional, and visually appealing.
